EECS 349

### Homework 3: Part 3

#### Question 1:

Package name: com.example.cs493.homework

#### Question 2:

List of permissions used:

- GET\_ACCOUNTS
- READ\_PROFILE
- READ\_CONTACTS
- CALL\_PHONE
- SEND\_SMS
- ACCESS\_FINE\_LOCATION

#### Question 3:

Password: 2250648

The class files were accessed using JD GUI to decompile the APK. I then analyzed the attempt login function by passing in my name for the name string and then printing the output of j. The variable j is then compared against the second argument to the attempt login function to see if they match. So, the value from j is the password that should be used to login. The password was then tested by running the app to see if it was valid.
